

AURA - Recorded Development Evidence

The measurements below are taken from the recorded development run supplied with the project submission. They are workflow measurements, not universal performance guarantees.

Metric	Recorded result
3-run benchmark average	2.79 s
Minimum benchmark run	1.61 s
Maximum benchmark run	4.79 s
Example document Q&A;	6.03 s
Example quiz generation	10.55 s
Automated tests	4/4 passed

Runtime context recorded with the benchmark utility: Windows 11, approximately 31.4 GB available RAM, and local model gemma3:1b through the configured local Ollama endpoint.

For the competition deployment, device-specific Snapdragon/NPU performance should be measured on the target device and reported separately.
